Technical Lead – Web & AI Engineer

Profile

Technical Lead and Web & AI Engineer with 7+ years of experience building web products, AI-enabled features, automation systems, and AWS-based platforms. Combines backend engineering, cloud infrastructure, LLM workflows, RAG, RPA/IPA automation, and team leadership to translate product requirements into systems, delivery processes, and business capabilities.

I speak Spanish (native) and English (B2).

Core Skills

Web Development: FastAPI, NestJS, Express, React, React Native, Next.js, REST, GraphQL, Webhooks, WebSockets, PWA, Payment Gateways, OAuth, PostgreSQL, MySQL, MongoDB, Redis, Aurora

Cloud, DevOps & Infrastructure: Amazon Web Services, AWS Containers, AWS Lambdas, AWS Instances, AWS Events, Linux, Nginx, systemd, journald, Docker, GitLab, Jenkins, DNS, CloudWatch

Artificial Intelligence & Automation: MindStudio, Model Training, LangChain, LangGraph, RAG, FAISS, Ollama, YOLOv8, n8n, PyTorch, Data analysis & visualization

Architecture & Engineering Practices: Scalable architecture, Design patterns, Clean code, Microservices, Distributed systems, Performance & complexity, Test-driven Development, Spec-driven Development, OpenAPI standard

Leadership & Management: Tech leadership, Mentoring, Agile planning & delivery, OKRs, KPIs, Process & workflow design, SRS, UML, Layered architecture, Hexagonal architecture, Data-driven decisions

Professional Experience

Data Driven Software Engineer | Planea | Mar. 2026 – Present

- Owned the full design, implementation, and deployment of a personal finance PWA using Ionic, React, Vercel, and Supabase, helping users track weekly financial milestones and update their monthly financial health score.
- Improved users' financial goal tracking by building data extraction, structuring, and analysis of flows that calculate weekly progress, identified improvement areas, and generated recommended actions.

- Built a financial analysis and recommendation engine by selecting relevant financial data, structuring it into analysis-ready flows, and translating user progress into actionable financial insights.

AI Engineer | Allup Teky | Jan. 2025 - Feb. 2026

- Reduced the time required to access operational information and generate reports by building LLM-powered assistants with LangChain, LangGraph, FAISS-based RAG, Ollama, AWS Bedrock, and relational databases.
- Automated support and analysis of workflows for field technicians and back-office administrators by enabling database retrieval, document retrieval, contextualized answers, failure-cause analysis, and custom report generation.
- Integrated AI capabilities into the web product, including conversational assistants, document and database retrieval, and AI-powered report generation and analysis.
- Trained a computer vision model with YOLOv8 and PyTorch to detect warehouse operational risks, including misplaced items, blocked zones, unsafe conditions, and visual compliance issues.
- Scaled AWS infrastructure with AWS Bedrock, ECS, RDS, EC2, CloudWatch, and ALB to deploy and operate AI features, backend services, routing layers, databases, and production monitoring.
- Automated repetitive analysis, validation, and information-processing tasks through RPA/IPA workflows that contributed to business intelligence and reduced manual work.

Programs Coordinator and Tech Director | HRBC Foundation | Apr. 2024 - Dec. 2024

- Centralized program operations by implementing web services, AWS infrastructure, operational documentation, internal workflows, and coordination tools that helped the foundation run programs through defined processes and connected services.
- Led multidisciplinary teams across programs, products, and technology to define needs, prioritize deliverables, coordinate implementation, and ensure quality assurance across digital services and operational workflows.
- Established technical documentation, operating procedures, and delivery standards to improve team communication and support effective product development across programs, product, and technology workflows.

Engineering Team Leader | Deltec | Feb. 2022 - Mar. 2024

- Standardized development, testing, deployment, server documentation, versioning, and requirements processes by creating team-wide scripts and technical documentation standards, reducing operational errors, and improving delivery continuity.

- Improved field asset tracking and operational control by building a geolocation system with OpenStreetMap and Mapbox that allows teams to locate assets, review their field status, and support decision-making.
- Coordinated production releases for completed milestones by aligning development, testing, versioning, documentation, and deployment workflows.
- Improved engineering execution by systematizing delivery practices across development workflows, CI-based testing, technical documentation, and production deployment processes.

Software and Innovation Team Leader | Eventech | Oct. 2020 - Jan. 2022

- Improved product usability and maintainability by leading UX-driven development and translating user needs into interfaces, reusable components, and consistent product flows.
- Increased development consistency by creating a reusable core codebase and shared component libraries for web product delivery.
- Supported platform continuity by managing infrastructure operations and migrations while reducing disruption to active services.
- Improved business visibility by building reporting systems that transformed operational data into decision-support information.

Software Analyst and Developer | Jikkosoft | Oct. 2019 - Feb. 2020

- Improved tax-calculation reliability by developing algorithms aligned with regulatory requirements and validation rules.
- Built billing and invoicing systems for public-services operations by implementing calculation logic, validation flows, and transaction-oriented software components.

Skills Showcase

I'd be happy to share my Web & AI skills demo. Is a work safety software powered by Vision AI to identify infractions and agentic LLM to retrieve relevant information from database. Please contact me at contacto@alejandrocr.co to schedule a meeting.
